Install Windows 98 On Virtualbox For Mac

The VM fails to boot completely, however I can boot into safe mode The error message I receive upon a regular startup is: While initializing device IOS0: Windows protection error.. Hello all, I am currently in the process of trying to convert an old PC that ran Windows 98 to a VM, this PC is still needed by a friend who has some old applications that are not supported on XP. as far as I know.. I'm trying to avoid having to do a clean install of Windows 98 in a VM, and then just migrating the data.. The PC will not boot, so I removed the hard drive, and made a VDI copy of the drive to attach to a Win98 VM.. I'm not sure if this person even still has the original install media for the programs they need.

install windows virtualbox

install windows virtualbox, install windows virtualbox mac, install windows virtualbox ubuntu, install windows virtualbox from usb, docker install windows virtualbox, macos install windows virtualbox, minikube install windows virtualbox, cannot install windows virtualbox, how to use install windows virtualbox, unable to install windows virtualbox, install virtualbox windows 10, install virtualbox windows 7, install virtualbox windows 10 64 bit, install virtualbox windows 10 home, windows install virtualbox guest additions, install virtualbox windows 8

install windows virtualbox ubuntu

docker install windows virtualbox
